Advanced pump Control Protection, and Optimization logic designed to prevent failures, improve pump reliability and maximize the Flow Economy of your process systems.

Whereas other vendors will sell the VFD for your pump, let us pick the right control solution for your system. Your success is our goal. We are here to help you analyze your existing system, select the best solution and help justify the benefits.

PumpSmart® provides the next level in intelligent pumping by using a standard variable frequency drive and directly embedding pump specific algorithms into the drive.
2 Ways to Benefit

Integrated Process Control
PumpSmart® offers automatic pump control by integrating the pump controller in the drive. No external controller is required, making PumpSmart a simple and cost-effective solution for your basic pumping needs.

Process Control Features
- Single Pump
- Multipump
- Advanced Pressure Control
- Cavitation Control
- PID Smart Flow

As standard, PumpSmart® systems come equipped with advanced process control features that help optimize your pumping system for maximum uptime, reliability and energy savings.

PumpSmart® is pump-specific and was developed to protect the pump and optimize pump control. PumpSmart® can be applied to any manufacturer’s centrifugal or positive displacement pump.

Drive for the DCS
While most VFDs can provide basic information to your control system, PumpSmart® systems have been designed to provide the important data you need to help run your process smoothly and efficiently.

The Drive and Process Integration

Use PumpSmart® as a standard VFD, and gain unprecedented insight into the performance of the pump with sensorless functions such as Smart Flow, Flow Economy and Advanced Pump Protection.

Horizontal Centrifugal Pump
Double Suction Centrifugal Pump
Submersible Pump
Vertical Centrifugal Pump
PD Gear Pump
PD Progressive Cavity Pump
PD Twin Screw Pump

Smart Flow
Flow Economy
Pump Protection
Basic Data Drive
Hardware I/O
Ethernet
Serial Bus
Enhanced Data

Smart Flow

**Sensorless flow measurement within +/- 5% of the pump’s rated flow.**

Determining the flow of a centrifugal pump can be a challenging exercise without a flow meter. PumpSmart® is able to capture real-time data such as speed, torque and power and use this information to calculate the flow of the pump.

Smart Flow requires only four pieces of standard price book performance curve data. A self-calibration function takes into account changes in mechanical losses and volumetric efficiency, and separates the true hydraulic load to calculate the actual pump flow.

Pump Protection

PumpSmart® can protect your pump from process upset conditions, such as dry-run, dead-head, shut-off, minimum flow and run-out. With patented sensorless pump protection algorithms, PumpSmart is able to determine the operating state of your pump at any operating speed. Using a simple load monitor function on a variable speed pump application can lead to false indications of pump distress. Be confident your pump is protected by the pump experts. Factors you must include in your pump protection logic:

- Variable Torque Load
- Mechanical Losses
- Volumetric Efficiency
- Eddy Current Losses
- Pump Wear
Flow Economy
Flow Economy is a simple metric that defines how much fluid can be moved per unit of energy. Similar to fuel economy of your car, Flow Economy defines how much flow (gpm or m3/hr) can be moved with 1 kilowatt (kW) of power.

Combined with Smart Flow, PumpSmart is able to calculate the Flow Economy of your pump allowing you to know what the true pump system efficiency is.

Integrated PID Control
PumpSmart® includes an integrated pump controller that can automatically control the pump based on feedback from a process transmitter. Pump-specific algorithms make field setup quick and simple.

PumpSmart® is ideal for all pumps that can benefit from simple and automatic control.

Typical Services:
- Pressure
- Flow
- Level
- Temperature

Cavitation Control & Protection
Low suction pressure can lead to the onset of cavitation, resulting in reduced flow and lower pump efficiencies. Prolonged exposure can even result in eventual pump failure.

PumpSmart® can monitor the suction conditions of your pump to protect against cavitation. Cavitation Control improves overall pump reliability in low NPSH services that routinely cause pump failure.

Typical Services:
- Evaporator
- Condensate
- Batch Transfer
- Unloading

Advanced Pressure Control
The practice of setting the pump to maintain the highest pressure requirement is a wasted opportunity to maximize the energy savings in a constant pressure system.

Advanced Pressure Control recognizes an increase in demand and automatically increases the pressure setpoint to match the system resistance curve, maximizing flow economy.

Reducing the pump speed can reduce the NPSH requirements of the pump which can help suppress the onset of cavitation.

Operating a pump with low suction pressure can result in the formation of cavitation.
Smart Control
When changing the speed of a pump with a relatively flat head-capacity curve, a small speed change can result in a large swing in flow. This type of system can result in unstable flow, making control very difficult.

Smart Control is able to increase and decrease pump flow by changing the pump torque rather than the pump speed. Controlling to pump torque can change a relatively flat pump performance curve into a steep, easy-to-control pump performance curve.

MultiPump Control
Control coordination between 2 to 4 pumps
All too often, multi-pump systems end up running with all the pumps on, all the time. This situation leads to high vibrations, pressure buildup and excess energy consumption... to name a few.

PumpSmart® runs only the pumps necessary to meet the current system demand. In addition, it ensures that flow is balanced between the operating pumps using our SmartControl functionality. In total, energy consumption is greatly reduced, and mean time between failure of the pumps and the surrounding system is vastly improved.
# Product Portfolio

## PS200

**Drive Platform**: ABB ACS800

- **Power**: 1-2250hp (1-1500kW)
- **Voltage**: 208-950Vac 3Ph +/- 10%
- **Input Frequency**: 48-63Hz
- **Efficiency**: 98% at nominal load
- **Input**: 6-Pulse Rectifier
- **Output**: Pulse Width Modulated (PWM)
- **Motor Control**: ABB Direct Torque Control
- **Output Frequency**: 0-300Hz (0-120Hz with/without filter)
- **Enclosure**: NEMA 1, NEMA 12 (IP21, IP54)
- **Temperature**:
  - 5-104°F (5-40°C) standard
  - 122°F (50°C) with de-rate
- **Altitude**: 0-3300ft (0-1000m) standard
  - 1312ft (4000m) with de-rate
- **Humidity**: 5-95% non-condensing
- **Applicable Standards**:
  - UL 508C, CSA C12 No. 14-95, EN 50178, EN 60647-1, IEC 60529, IEC 60664-1, EN 61800-3 + Amendment A11, CE Compliant

## PS75

**Drive Platform**: ABB AC Drive

- **Power**: 1-150hp (1-90kW)
- **Voltage**: 208-950Vac 3Ph +/- 10%
- **Input Frequency**: 48-63Hz
- **Efficiency**: 99% at nominal load
- **Input**: 6-Pulse Rectifier
- **Output**: Pulse Width Modulated (PWM)
- **Motor Control**: Sensorless Vector
- **Output Frequency**: 0-300Hz (0-120Hz with/without filter)
- **Enclosure**: NEMA 1, NEMA 12 (IP21, IP54)
- **Temperature**:
  - 5-104°F (5-40°C) standard
  - 122°F (50°C) with de-rate
- **Altitude**: 0-3300ft (0-1000m) standard
  - 1312ft (4000m) with de-rate
- **Humidity**: 5-95% non-condensing
- **Applicable Standards**:
  - UL 508C, CSA C12 No. 14-95, EN 50178, EN 60647-1, IEC 60529, IEC 60664-1, EN 61800-3 + Amendment A11, CE Compliant

Monitoring and Control

Increased Uptime and Reduced Operating Costs

Leveraging our 160+ years in process machinery design, manufacture and operation, ITT Monitoring and Control products and services have one goal — improving your plant’s profitability. Our ProSmart® systems provide continuous, predictive monitoring of all your rotating equipment at an exceptionally low price.

Our PumpSmart pump control systems provide real-time control and protection of your centrifugal pumps while also providing valuable process knowledge without the need for additional sensors. Our Performance Services team delivers our system knowledge to your plant floor to help you optimize the performance of your system.
